

## Progress Report: Sri Lanka Clinical Trials Registry

---

SLCTR registration number: SLCTR/2018/008

Scientific title of trial: Conducting operational research to identify numbers and rates, determine needs, and integrate services to mitigate morbidity and mortality among internally displaced persons affected by emergencies

Date of commencement (enrolment of first participant): 16 March 2018

Progression: 6 months  1 year X 2 years  3 years   
At completion

---

### 1. Baseline data

Any changes to the trial design/ methodology/ protocol after commencement: No

Any changes to trial outcomes after commencement: No

### 2. Current status

Recruitment status: Recruiting

Number assessed for eligibility: 140

Number recruited and allocated/randomized: 119

Number allocated/randomized to each intervention/arm (please edit as relevant)

Arm 1: Each clinic acts as its own control (pre/post training comparison) therefore all 119 participants eligible for recruitment are in this arm

Losses/exclusions after allocation/randomization:

Arm 1: 0

### 3. Trial output

Summary of Interim/Final data (if available):

As the clinical trial is currently underway there is limited interim data to report. The clinical trial timeline has been revised to accommodate external circumstances (such as the Easter 2019 security incidents) and the current timeline projects the end of the trial by June 2020. Recruitment and enrolment are carried out with a view towards this timeline and the intervention is being implemented successfully. Feedback from participants has been consistently very positive and support from local partners has been excellent and timely. Electronic and paper data collected from participants is being cleaned in preparation for analysis at the completion of the trial. The Principal Investigator has travelled to Sri Lanka regularly since the commencement of the trial to supervise implementation and liaise with local partners and stakeholders.
